

Pink Kush by Canna Farms

Pink Kush is a THC dominant strain that contains 25% THC, the intoxicating chemical, which provides some sedative effects, making it best used in the evening. Pink Kush also contains two dominant terpenes (amongst others), beta caryophyllene and myrcene, which are also known to have relaxing properties.

Patients have reported that Pink Kush provides above average relief for several symptoms. Migraines are reported to be reduced by 55% when using Pink Kush compared to other strains that are reported to reduce migraines by an average of 39%. It is also reported to provide higher than average efficacy for treating gastrointestinal issues, like nausea and lack of appetite, which are often the result of eating disorders, cancer treatment or stomach issues from Crohn's disease. Patients report that Pink Kush reduces nausea and lack of appetite by 57%, compared to the average efficacy for all other products of 52% and 53%, respectively, for these symptoms. Insomnia is also well treated by Pink Kush, with patients reporting an average efficacy of 51%, compared to the average efficacy of 44% for other products used to treat insomnia. Finally, PTSD Flashbacks are reduced by 46% with the use of Pink Kush, compared to other strains that are reported to reduce Flashbacks by 42%

Pink Kush is reported to be most effective among males and those over age 35. The most common effects felt when consuming Pink Kush are feeling relaxed and comfortable.

All data was gathered on the Strainprint App. from March 2017 to April 2020
Base Size: Pink Kush- Users (n=902), ePRO's (n=30867)
